

Seriously

Smooth

Vertical Vodka is the smoothest Vodka one can find as it is the result of four distillations. The first two in stainless (inoxidizable) stills, the latter two distillations in tin-plated copper vats. These copper vats, also known as "pot stills", are used because unlike any other distillation processes, they are able to capture and retain the essence and unique flavours of Vertical Vodka.

These processes give Vertical Vodka it's grainy character and smoothness; attributes that contribute to it's remarkable quality and versatility.

- 100% grain base.
- No artificial colouring or flavour
- No preservatives.
- No cork closure so that the cork cannot alter the purity.

Made in the same distillery and by the same technicians who make Chartreuse.

Products stocked by all major distributors
